

Math 231: Homework 8 (due W November 22)

- Next Thursday is Thanksgiving so we will do things a little differently. I will use Tuesday as a regular class next week. Then on Wednesday I will go over homework, answer questions and give you some time to write up any solutions to things you couldn't do, before turning the homework in at the end of class.
- Our final exam is at 10.15 on Friday of finals week, as posted on the syllabus at the beginning of term. A couple of weeks ago I wrote the wrong time down on a homework sheet so take care!
- We've pretty much finished chapter three. In the rest of term we're going to cover sections 1.6, 4.2, 4.4, 4.5 and 4.6. I suggest you look over these sections in the text book to get an idea of what is covered there before we do it in class.
- This is the last graded homework. This means I have to set some problems from chapter 4 on mathematical induction before we've had much time to go over how to do them in class. I will go over those five questions carefully in class on Wednesday November 22. Make sure you try them first (hint: try copying examples from the text book!).
- Do the following problems:
 - Problems from section 3.3: 15,17.
 - Problems from section 3.4: 7,9,15.
 - Problems from section 3.5: 9,10,11,15,22.
 - Problems from section 4.2: 5,6,7,8,9.
