

INTEGRATIVE SCIENCE COMPLEX - Phase 2

AGENDA: Computer/Geo Sciences User Group

Thursday, May 29, 1 pm, 207 Deschutes

1. See the CIS Visualization Lab, discuss as prototype for ORVIL
2. Create a modular and scalable laundry list related (in a broad sense) to scientific computing, visualization and collaboration (the latter as interface to other concerns, including instruction, data curation, etc.)
3. Space type and location: is it specific to ISC2, release space in existing buildings, or ISC3? Or can be in any of the above? Or is built at one scale now, and then scaled up in a future phase?
