Graduate Entrance Exam: Description and Study Guide

A two-hour entrance examination in music history and a two-hour entrance examination in music theory and aural skills are required of all graduate students before their first term of enrollment. The examination is given before the beginning of each term. Students who score below the designated levels must enroll in a prescribed course or courses at the first opportunity (review courses are offered in the fall and summer terms of each year).

Music History

Part One
Listening
Ten listening examples will be played twice (each approximately 30–90 seconds in length). For each example, identify a probable or likely composer, a fifty-year span during which the example could have been composed (e.g., 1875–1925, 1700–1750), and a probable title, form or genre as far as it may be evident. (30 points)

Part Two
Short-Answer Questions
1. Nine musical terms will be listed (e.g., the term madrigal). You are to (1) describe each term as it applies to music and (2) name a specific stylistic period or periods associated with the term. (18 points)

2. Ten composers will be listed. Name the style period and nationality generally associated with each composer. (20 points)

Part Three
Essay
You will be asked to write on one essay question from a selection of four (e.g., discuss the main developments in opera from its beginnings to Wagner) (20 points). PhD students with a primary area in musicology will choose two essay questions. (40 points total)

Part Four
Score Recognition
Three excerpted scores will be provided. Give a likely composer, approximate date of composition (within the limits specified on the listening portion of the exam), possible genre, and one reason for your answer. (12 points)

Suggested Study Materials for Exam Preparation
Music history textbooks such as:

Anthologies of Western music and recorded anthologies of Western music such as:

---

**Music Theory and Aural Skills**

**Part One, Aural Skills**

**A. Melodic Dictation (20 points)**

A melody of moderate difficulty (diatonic with large skips) will be performed five times by the instructor at the piano. Clef and key will be given (i.e. “Eb major,” but not time signature or starting pitch. The student will determine the meter and starting note, and notate the melody correctly.

**B. Singing a Melody at Sight (tested individually, 30 points)**

The notation of a melody will be given. After one minute of preparation and a reference pitch from the piano, the student is asked to sing the melody.

Note: in this exercise, the melodies are not necessarily from a familiar repertory, but are equivalent in their level of complexity.

A typical example:

C. Harmonic Dictation/Identifying Chords in Context (50 points)
A short, chordal excerpt from a piano sonata will be played three times. The student will be given the notation of the excerpt’s rhythm, with certain notes numbered:

```
1  2  4  5  6  7  8  etc.
```

The first and third playings of the excerpt will be in a regular tempo (about MM=60), but on the second hearing the instructor will pause on the numbered chords. The student is asked to identify those chords by Roman numeral and inversion, or alternatively by lead-sheet symbols with “slash-chord notation” indicating the bass note (e.g. G7/B).

The vocabulary of chords includes the following: diatonic triads and seventh chords (including the fully-diminished seventh chord) and secondary dominants, dominant sevenths, and diminished sevenths of all scale degrees (V/ii, V/7/iii, viio7/V, etc.). Any chord may appear in inversion, and there may be a simple modulation to a closely related key.

Part Two, Concepts
A. Analysis (65 points).
An excerpt from a string quartet will be given in score. Five of the chords and five of the non-harmonic (non-chord, complementary) tones will be marked with numbers. The student is asked to identify the chords by Roman numeral, and the non-harmonic tones by type. Some non-harmonic tone types that could occur include the following:

- Passing tone
- Upper neighbor
- Suspension
- Escape tone (incomplete neighbor)
- Appoggiatura (incomplete N)
- Rearticulated suspension

In addition, a schematic representing the measures of the excerpt will be given:
```
1 | | | | 5 | | | | 10 | | | | 15 | | etc.
```

The student will be asked to mark the excerpt’s phrases on this schematic with brackets or arches, and to identify each phrase’s cadence as authentic (V-I), plagal (IV-I), half (x-V) or deceptive (V-vi).

B. Harmonization/Figured Bass Realization (35 points)
A short four-part writing exercise will be given (four measures), in which the first half consists of a melody, and the second half is a bass line with figures representing the intervals above the bass. (The figures use the standard shorthand taught in undergraduate theory courses—a blank space represents the root position triad, 6 represents first inversion, 7 a root position seventh chord, etc.). The student will be
asked to harmonize the melody in four parts (including choosing appropriate chords), and realize the figured bass in four parts (the chords will be indicated by the figures). It is important for the student to follow proper voice-leading principles in this exercise: avoiding parallel fifths and octaves, resolving active tones in the right direction, and doubling and spacing chords correctly.

**Suggested study materials for exam preparation**

Some textbooks/exercises that could be useful in preparing for the theory entrance exam:

**Aural Skills (melodic dictation and sight singing):** Robert Ottman, *Music for Sight Singing*

**Aural Skills (harmonic):** find a repertory of chordal music (any traditional Protestant hymn book will suffice—*not* one of the more recent ones), and have another student play you excerpts, stopping on certain chords after the first hearing and asking you to identify them.
