

**QUESTIONNAIRE**

This questionnaire is due on Friday 4 April in class. Turning it in counts as part of the homework grade.

What is your (intended) major?

What is your class standing (freshman, sophomore, etc.)?

What was the last math course you took?                    When did you take it?

What grade did you get?                    Where did you take it?

Did you ever take the placement exam?                    If so, when?

What score did you get?

What do you hope to get out of this course?

If possible, please give me examples of places you expect to use or need calculus, and briefly tell me what you can about how and why you might need calculus in those places.

Have you seen derivatives already?

If so, where? (For example, in previous math courses, in high school, in courses outside the Math Department, such as physics, or elsewhere.)

Tell me briefly something interesting about yourself. (Maybe your favorite food, what foreign languages you speak, your favorite national park, number of siblings, favorite color, ....)
